

**What the invention claimed is:**

1. A mobile filing unit comprising  
a housing, said housing having a top open side;  
two tracks horizontally bilaterally mounted inside said  
5 housing near said top open side;  
two sliding rails respectively coupled to said tracks and  
longitudinally movable relative to said tracks;  
a face panel connected between said sliding rails and  
movable with said sliding rails in and out of said tracks to  
10 close/open said top open side of said housing; and  
a hanging rack mounted inside said housing below said  
tracks for the hanging of hanging files, said hanging rack  
comprising two first rod members arranged in parallel and two  
second rod members connected in parallel between said first rod  
15 members.
2. The mobile filing unit as claimed in claim 1, wherein  
said sliding rails each comprise two lugs near two distal ends  
thereof; said face panel comprises a plurality of locating blocks  
bilaterally symmetrically disposed at a bottom side thereof and  
20 respectively fastened to the lugs of said sliding rails with screws.
3. The mobile filing unit as claimed in claim 1, wherein the  
first rod members of said hanging rack each have two distal ends  
respectively provided with a respective mounting ring for fastening

to said housing.

4. The mobile filing unit as claimed in claim 1, further comprising a storage box mounted inside said housing, said storage box having a plurality of top hooks for hanging on the second rod  
5 members of said hanging rack.

5. The mobile filing unit as claimed in claim 4, wherein said storage box has a plurality of ribs symmetrically bilaterally disposed on the inside, said ribs dividing the holding space of said storage box into a plurality of compartments.

10 6. A mobile filing unit comprising:  
a housing, said housing having a top open side;  
two tracks horizontally bilaterally mounted inside said housing near said top open side;  
two sliding rails respectively coupled to said tracks and  
15 longitudinally movable relative to said tracks;  
a face panel connected between said sliding rails and movable with said sliding rails in and out of said tracks to close/open said top open side of said housing;  
a hanging rack mounted inside said housing below said  
20 tracks for the hanging of hanging files, said hanging rack comprising two first rod members arranged in parallel and two second rod members connected in parallel between said first rod members; and

a storage box mounted inside said housing, said storage box having a plurality of top hooks for hanging on the second rod members of said hanging rack.

7. The mobile filing unit as claimed in claim 6, wherein  
5 said sliding rails each comprise two lugs near two distal ends thereof; said face panel comprises a plurality of locating blocks bilaterally symmetrically disposed at a bottom side thereof and respectively fastened to the lugs of said sliding rails with screws.

8. The mobile filing unit as claimed in claim 6, wherein the  
10 first rod members of said hanging rack each have two distal ends respectively provided with a respective mounting ring for fastening to said housing.

9. The mobile filing unit as claimed in claim 6, wherein  
said storage box has a plurality of ribs symmetrically bilaterally  
15 disposed on the inside, said ribs dividing the holding space of said storage box into a plurality of compartments.
